## PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience building scalable, high-performance web applications using React, Next.js, and TypeScript. My background is rooted in frontend engineering for complex, mission-critical systems — including 3+ years at Infostrategic delivering UAE government platforms where I improved Lighthouse scores from 70–80 to 90+, reduced integration bugs by 20–30%, and built reusable component libraries that accelerated delivery. I have hands-on experience building PWAs with offline-first synchronization and Optimistic UI patterns, developing real-time data interfaces using WebSockets and Server-Sent Events, and designing map-driven and geospatial visualizations. I've designed BPMN-based workflow systems, implemented automated testing suites (unit, integration, E2E), and applied frontend security best practices including XSS prevention and secure token handling. Beyond frontend, I've expanded into full-stack development with NestJS, PostgreSQL, and MySQL, and I'm comfortable working across CI/CD pipelines, Docker, AWS, and Kubernetes environments. I thrive in ambiguous, fast-moving environments — translating high-level product goals into reliable, production-grade systems..

## CORE COMPETENCIES

Frontend Architecture • PWA & Offline-First • Optimistic UI • Real-Time Data (WebSocket / SSE) • Performance Optimization • SSR / ISR / App Router • Map-Driven & Geospatial UI • BPMN Workflow Design • Dynamic Form Systems • Automated Testing (Unit / E2E) • Frontend Observability • Web Security (XSS / Token Handling) • RTL / i18n • Web Accessibility (WCAG) • Agile / Scrum

## TECHNICAL SKILLS

|                          |                                                                                                                                                   |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Programming Languages    | JavaScript (ES6+), TypeScript, Python, HTML5, CSS3                                                                                                |
| Frameworks & Libraries   | React.js, Next.js (App Router, SSR, ISR), PWA, Node.js                                                                                            |
| State Management & Forms | Redux, Context API, Zustand, React Query, Zod, Form.io — including Optimistic UI & offline-first sync patterns                                    |
| UI & Styling             | Tailwind CSS, Material UI (MUI), shadcn/ui, Bootstrap, Mapbox GL JS / Leaflet, Figma                                                              |
| Testing & Observability  | Jest, React Testing Library, Cypress (E2E), Playwright — unit, integration & E2E testing; frontend performance monitoring & observability tooling |
| APIs & Backend           | RESTful APIs, WebSocket / Socket.IO, tRPC, NestJS, Spring Boot, SMTP Integration, Thymeleaf                                                       |
| Internationalization     | next-intl, i18n — full Arabic/English bilingual support with RTL/LTR handling                                                                     |
| Databases                | PostgreSQL, MySQL, SQL Server (DBever, SSMS)                                                                                                      |
| DevOps & Tools           | Git (GitHub/GitLab), Docker, Kubernetes (EKS), AWS, CI/CD Pipelines, Terraform, Postman                                                           |
| Methodologies            | BPMN Workflow Design, Agile / Scrum, Frontend Security (XSS Prevention, Secure Token Handling), Business Requirements Analysis                    |

## PROFESSIONAL EXPERIENCE

## Software Engineer | Full-Stack Developer — React, Next.js, NestJS | Infostrategic (Virtual Trust), Abu Dhabi

January 2023 – Present

- Built and maintained scalable React.js and Next.js PWA applications for UAE government and enterprise clients, improving page load performance by up to 35% through SSR/ISR strategies, code splitting, and service worker caching for offline-first resilience.
- Led full bilingual (Arabic/English) platform implementation with 100% i18n coverage and correct RTL/LTR handling across complex approval workflows.
- Delivered two live government platforms: the Sharia Judiciary Department portal ([sjd.ae](http://sjd.ae)) and the Fatwa UAE portal ([fatwauae.gov.ae](http://fatwauae.gov.ae)) — both serving thousands of public users.
- Adopted a Low-Code Platform (LCP) approach using Form.io to build configurable dynamic form engines, reducing repetitive frontend code by approximately 40% and accelerating project setup time.
- Developed and customized advanced Form.io and BPMN-driven components supporting visual workflow definition, complex approval flows, conditional rendering, and real-time backend-driven configurations via WebSocket integrations.
- Built reusable UI component libraries that reduced new-module development time by 25% and improved cross-project consistency.
- Boosted Lighthouse performance scores from the 70–80 range to 90+ across multiple production pages, with focus on Core Web Vitals and SEO optimization.
- Reduced frontend integration bugs by 20–30% through defensive programming, frontend security practices (XSS prevention, secure token handling), and close API contract alignment with NestJS and Spring Boot backend teams.
- Implemented automated testing suites including unit, integration, and E2E tests (Jest, React Testing Library, Cypress), alongside frontend performance monitoring and observability tooling to enable proactive incident detection and root-cause analysis.
- Translated Figma designs into pixel-perfect, responsive implementations while maintaining design system consistency and accessibility standards (WCAG).
- Participated in full Agile cycles — sprint planning, daily standups, stakeholder demos, and retrospectives.

## Freelance Front-End Developer | Remote

2021 – 2023

- Delivered custom React & Next.js applications for small businesses and individual clients, handling full project lifecycle from requirements to deployment.
- Developed responsive landing pages, dashboards, and integrated REST APIs and third-party services.
- Applied cross-browser compatibility, performance optimization, and SEO best practices.

## KEY PROJECTS

---

### Sharia Judiciary Department Portal — [sjd.ae](http://sjd.ae)

Government-grade Arabic-first platform built with Next.js, supporting complex BPMN workflows, dynamic Form.io forms, and full RTL interface for public case management.

### Fatwa UAE Portal — [fatwauae.gov.ae](http://fatwauae.gov.ae)

Bilingual public portal (Arabic/English) enabling citizens to submit religious inquiries. Implemented multilingual routing, RTL/LTR toggling, and mobile-first responsive design.

## EDUCATION

---

### Bachelor's Degree in Mechatronics Engineering | Al Manara University

Engineering background provides strong analytical and systems-thinking foundation — applied directly to architecting complex front-end workflows and data-driven UI patterns.

## LANGUAGES
